Figure 2.1. Map of Neolithic sites (after Papathanassopoulos, 1996, Figure 2)
Fig. 11. The Neolithic ‘acropolis’ at Dimini. (Papathanassopoulos 1981: 40-41).

- Enclosures and buildings.
- Main peripheral and radial roadways on the ‘acropolis’.
- Areas of intensive ‘craft-industrial’ activity between the second and the third enclosure on the ‘acropolis’.
- Specialized pottery workshop (E).
- The largest dwelling in the settlement with private workshops and storage areas (house N).
- The interior of the ‘acropolis’ with the large central court and buildings and workshops ranged along the inside of the first enclosure.
- Early Bronze Age buildings.
- The ‘Megaron’ as formed at the beginning of the Early Helladic period.
- Mycenaean buildings.
- Extensive free communal space between the second and the third enclosure of the ‘acropolis’, for outdoor tasks and penning livestock.

Figure 6.1. Geological map of the Makrygialos area (after Krahtopoulou 2001)
Holocene: alluvial deposits
Holocene: Talus cones, scree and torrential terraces
Pleistocene: volcanic rocks
Neogene: fluvial-lacustrine and terrigenous deposits
Postflysch tectonic nappe: crystalline limestone
Postflysch tectonic nappe: peridotites and gabbros
M. Senonian (?): Maestrichtian - Paleocene (?): flysch
Cenomanian - M. Senonian: limestones transgressive
Pre-upper cretaceous tectonic nappe: serpentinitized peridotites - serpentinites
Pre-upper cretaceous tectonic nappe: amphibole - epidote - chlorite schists
Pre-upper cretaceous tectonic nappe: gneisses - schists
Upper (? ) jurassic: mica schists - phyllites
Middle triassic: Upper Jurassic: marbles
