Rose

Most of the data that is not sensitive is published in OA Journal and deposited with White Rose. Immediate benefits are immediate.

The request is accurate and necessary to protect our data and ensure that we/the UoS
For extension and further protection.

The danger with limited embargo is that expiry dates are forgotten when there is a need reported in theses.

Suggested on request. The generation of initial data, for example the, spin out company's, EXPLOITATION (portfolio) EXPERIENCE has shown that commercially sensitive data is often exploited many years (9+).

Some in completing the embargo of the theses.

The thesis was not presented in a modular fashion as a series of chapters; hence, this cannot easily be removed/reduced. Reduction of the theses to obscure the sensitive data is not a simple process. A substantial portion (most) of the data (that which is not commercially sensitive) has been published and is available in an open-access source. There is no process of the theses to obscure the sensitive data is not a simple process.

The theses describes the results of chemical library screens against an important oncology target.
