## APPENDIX 1

### List of Provenanced Finds included in the Analysis. (Fig 9)

1. Ferwerd; 1 coin supposedly found in 1877, regarded as 'dubious' by Op den Velde et al (1984:141).
2. Hallum Hoard; hoard of at least 223 sceattas found in 1866. Included at least 173 of series X. Some 201 coins are now in the Fries Museum in Leeuwarden (L.F.M.), including 155 of series X, 21 of series S.D., 13 series E and 12 English and Merovingian types (Op den Velde et al 1984:141).
3. Bolsward; Supposedly acquired in Bolsward before 1836. Again regarded as 'dubious' (Op den Velde et al 1984:140).
4. Terwispel; hoard of 161 series X sceattas found on the bank of the River Boorn in 1863. No other varieties were present, some 141 are now in the Fries Museum. The coins were badly cleaned after their discovery resulting in the loss of much of the surface detail (Op den Velde et al 1984:142; Bendixen 1981:69). Some 146 coins from Terwispel are included in the analysis.
5. Xanten; single coin discovered in excavations in the Cathedral; probably originally deposited in a grave (Zedelius 1980).

6. Domburg; Almost 1000 sceattas have been found on the beach at Domburg, including 120 of series X (Op den Velde et al 1984:141). These coins are now divided between the collections in the Hague (HPK) and the Museum at Middleburg (MZG). Most are corroded and illegible.

7. Schouwen; one coin said to have been found in 1967. Regarded as 'dubious' by Op den Velde et al 1984:142).

8. Rotterdam; one coin said to have been found during dredging operations, again 'dubious' (Op den Velde et al 1984:142).

9. Dorestad; only 3 series X are reported to have been found at Dorestad (Op den Velde et al 1984:143).

10. Maurik; 2 series X were discovered along with other sceattas and Roman coins in sand and gravel dredged out of the Rhine (OP den Velde 1982).

11. Cimiez; two coins of series X from the Cimiez hoard were illustrated by Le Gentilhomme (1943). One of these has annulets instead of crosses and is therefore likely to belong to the group of 'insular imitations'. The other appears to be of regular style.

12. Ahus; three series X coins were discovered during

excavations at a site near Ahus in Scania. Two were die duplicates, although of almost pure copper, and in regular style as was the third coin (Callmer 1984; Bendixen 1984).

13 Krinkberg; one coin was found during excavation of a burial mound. It was found in proximity to a hoard of coins of Charlemagne. In 1984 two other series X were found at the same site (not included in the analysis).

14. Haithabu; 2 series X coins have been found, the first during excavations in the South Settlement and the second apparently on the surface inside the walled area (Hatz 1965; Bendixen 1984).

15. Danekirke; 13 Early Medieval coins, including 5 of series X were found during excavations at Danekirke (Bendixen 1981).

16. Ribe; excavations at the Early Medieval site of Ribe produced some 30 sceattas, including 25 series X (Bendixen 1981). More recent excavations have produced a further 30 coins of series X. Unfortunately these were not available for inclusion here.

17. Holmsland Klit; numerous coins of various periods have been found on the beach at this site on the west coast of Jutland. Included is one poorly preserved example of series X.

18. Dunbar; a single coin of series X was found during excavations at Dunbar in Scotland. This is a coin in regular style and is the most northerly find spot in Britain (P.E. Holdsworth pers. comm.).

19. Kent; coin in the British Museum said to have been found on the Isle of Thanet in 1756 (Rigold and Metcalf 1984:260)

20. Hamwic; This Early Medieval trading site has produced some 120 sceattas including 9 of series X. Of these 4 appear to be insular imitations with annulets instead of crosses on the obverse and of poor alloy (Metcalf 1988).

21. Hod Hill; 1 coin of series X has been found on the flanks of Hod Hill along with other sceattas. This is not in regular style and is probably an insular type (Keen 1979; Rigold and Metcalf 1984:252).

22. Wells; a coin with annulets on the obverse was discovered in a grave during excavations at the cathedral (Rodwell 1982).

23. Rotherhithe; a coin of series X was found on the Thames foreshore (Blackburn and Bonser 1987, no. 96).

24. Datchet; one coin found in a garden in Datchet (Metcalf 1976 , pl.I.4; Rigold and Metcalf 1984:250).

25. Tackley; coin now in the Ashmolean Museum (Metcalf 1976)
26. Baldock; 1 coin of regular style (Blackburn and Bonser 1985).
27. Nr Royston; a large number of coins found at this unlocated site including 49 sceattas. There were two coins in an 'English style' which may be early in date (Blackburn and Bonser 1986:76).
28. Nr Thetford; single coin in regular style (Blackburn and Bonser 1985, no. 94).
29. West Stow; coin found during excavations at Anglo Saxon village site. It is similar to, but cruder in style than, the coins from Royston (Rigold and Metcalf 1984:265; Blackburn and Bonser 1986).
30. Osbournby; single find in regular style but corroded (Rigold and Metcalf 1984:257; Blackburn and Bonser 1985,no.96).

## APPENDIX 2

### List of Collections and Abbreviations in Appendices.

The vast majority of the coins used in the analysis are from three major collection in Holland;

HPK; This is the Koninklijk Penningkabinet, which was formerly in the Hague but which has since been moved to Leiden. This contains many of the coins from the Marie de Man collection of coins from Domburg as well as early finds from Dorestad and part of the Franeker hoard (Op den Velde et al 1984:144).

LFM. This is the collection in the Fries Museum in Leeuwarden which contains the coins from Hallum Terwispel and the rest of the coins from Franeker.

MZG. Zeeuws Museum, Middleburg. Most of the coins in the collection probably originated from Domburg but also probably includes coins from other sites in Zeeland. Coins came from various collectors including Van Rede and Bogaert (Op de Velde et al 1984:145).

For other coins in the analysis a collection is given when known, or if not, then some reference to a publication is given so that all the coins listed should be locatable either from this information or from the provenance. A number of collections and abbreviations are explained below.

There are coins of series X illustrated in a number a volumes of the Syllogue of Coins of the British Isles:

AMERICAN COLL; SCBI 30 Ancient British, Anglo-Saxon and Norman coins in American Collections (Brady 1982)

BERLIN; SCBI 36 Anglo-Saxon, Anglo-Norman and Hiberno-Norse coins in State Museum Berlin Coin Cabinet (Kluge 1987).

FITZWILLIAM; SCBI, Fitzwilliam Museum Cambridge, part1. Ancient British and Anglo Saxon Coins (Grierson 1958).

HUNTERIAN; SCBI, Hunterian and Coates Collections, University of Glasgow (Robertson 1961).

NORWEB; SCBI 16, Collection of Ancient British and English Coins formed by Mrs E.M. Norweb. (Blunt et al 1971).

Other abbreviations include:

BBR; Cabinet de Medailles Bibliotheque Royale de Belgique

LBM; British Museum

LIHA; Leiden Institute for the History of Art. A number of coins are in the collections including two from Terwispel. Information on these was obtained from Dr W. Op den Velde.

PBN; Paris Bibliotheque Nationale.

Otherwise the location of coins should be clear from

their provenance. Appendix 1 and fig 9 should also be consulted.

## APPENDIX 8

Using the formula suggested by Esty (1974) the coverage of the surviving dies was calculated for each of the main reverse group in the series as a whole. In addition confidence intervals of 95%, 90% and 68% were also calculated using Esty's formula. These graphically show the very wide limits of confidence because of the small samples involved.

For example for reverse group c the coverage is .364 or the known dies represent 36% of the total output. The 95% confidence interval is .203, or 20%. Thus there is a 95% possibility that the known dies of reverse c represent between 16% and 56% of the total output. In some of the other groups the interval is even greater. Further the coverage and confidence intervals were calculated for reverse groups c-j as a whole and for the obverse groups Ca-Cc and B and the combined obverse groups. The combined groups give more acceptable figures and it seems likely that c.40% of the Monster dies and c.30% of the Wodan dies are known.

### Reverse Gp c

Coverage	=	.364	(36%)
95% confidence interval	=	.364 + .203	
90% " "	=	.364 + .169	
68% " "	=	.364 + .103	

Range 16-56%

Reverse Gp d

Coverage = .278 (28%)

95% confidence interval = .278 + .226  
90% " " = .278 + .188  
68% " " = .278 + .103

Range 5-50%

Reverse Gp e

Coverage = .558 (56%)

95% confidence interval = .558 + .260  
90% " " = .558 + .218  
68% " " = .558 + .133

Range 29-81%

Reverse Gp f

Coverage = .474 (47%)

95% confidence interval = .474 + .396  
90% " " = .474 + .334  
68% " " = .474 + .202

Range 7-87%

Reverse Gp g

Coverage = .227 (23%)

95% confidence interval = .227 + .215  
90% " " = .227 + .180  
68% " " = .227 + .109

Range 1-44%

Reverse Gp h

Coverage = .417 (42%)

95% confidence interval = .417 + .362  
90% " " = .417 + .304  
68% " " = .417 + .184

Range 5-78%

Reverse Gp i

Coverage	=	.480	(48%)
95% confidence interval	=	.480	+ .223
90% "	=	.480	+ .188
68% "	=	.480	+ .114

Range 25-70%

Reverse Gp j

Coverage	=	.182	(18%)
95% confidence interval	=	.182	+ .240

FIGURE 27

NUMBERS OF EQUIVALENT DIES

Using the formula;

$$\frac{\text{NON-SINGLETONS}}{\text{KNOWN COINS}} = \frac{\text{KNOWN DIES}}{\text{TOTAL OUTPUT}}$$

and the calculation of 95% confidence limit from Esty (1984)

In the Hallum Hoard:

Reverse/Monster die:

$$\frac{41}{129} = \frac{104}{32\%+11\%} = 241-495$$

ie: there are an estimated 241-495 Monster dies

Obverse/Wodan die:

$$\frac{36}{134} = \frac{111}{27\%+8\%} = 317-584$$

ie: there are an estimated 317-584 Wodan dies.

In the Series X as a Whole:

Reverse/Monster dies ;

$$\frac{77}{177} = \frac{157}{43\%+9\%} = 301-461$$

ie: there are an estimated 301-461 Monster dies.

Obverse/Wodan dies (Ca, Cb, Cc, B)

$$\frac{65}{213} = \frac{175}{30\%+10\%} = 437-875$$

ie: there are an estimated 437-875 Wodan dies.

Figure 27 (cont)

Comparison with Equivalent dies in other coinages:

	Obv	Rev	
N'thumb Eadberht	187-382	287-730	(Metcalf 1984)
Type 49 Hamwic or	154-541 105-254	216-?	(Metcalf 1988)
Series X	301-461	437-875	

Coinage of Aethelred II from the Lincoln Mint  
(Lyon 1971).

First Hand	37-72	55-126
Crux	127-158	176-226
Long Cross	164-176	201-215
Helmet	96-119	93-121
Last Small Cross	294-325	346-395

g	33	82
h	20	21
i	26	35
j	154	111

#### NOTE ON THE PLATES

Where possible the photographs have been reproduced at twice actual size (x2). In some cases, particularly in the non hoard coins, negatives were not available and this scale could not be adhered to. For many of the coins from HPK and MZG photographs at 2.5-3.0 x actual size were available and these were used. For other coins the scale varies and in some cases only photocopies of published photographs were available.
