Hi Michelle

As discussed, my response to the comments received from English Heritage is as follows :-

- Full details of the terne-coated stainless steel roof, roof lights, eaves and specification for the green roof can all be controlled through conditions on any approval.
- I have no strong views as to whether the masonry to the new south extension should be ashlar (as proposed) or coursed rubble masonry (as suggested by English Heritage) and in any event I have suggested a condition that a sample panel of the stonework should be constructed on site for inspection and approval, in addition to samples of external materials for approval.
- Although internal alterations form part of the proposals and have been included with the application for completeness, planning permission is required only for alterations which materially affect the external appearance. As a place of worship in use, the internal alterations require a faculty under the ecclesiastical exemption and therefore we need not comment on these elements as part of the planning application.

Please let me know if you need to discuss further.

Many thanks

David
