VOLUME II: CONTENTSSummary of Maps and Tables

- Maps P1-P58: phonological maps (vowels)  
 Maps PP1-PP15: phonemic types and oppositions (vowels)  
 Maps PC1-PC6: phonological maps (consonants)  
 Maps L1-L77: lexical maps  
 Maps M1-M4: material cultural maps  
 Maps A1-A9: dialect areas  
 Maps G1-G3: landscape and topography  
 Tables T1-T25: frequency and distribution tables for allophones of  
                   vowel diaphonemes  
 Tables C1-C5: indices for participation in phonetic changes  
 Tables TP1-TP4: phonemic oppositions  
 Tables TA1-TA7: dialect areas  
 Maps X1-X3 (in pocket): overlay maps corresponding to G1-G3

### 2. Mapping Conventions

Isopleth Maps (see 1.4.4)

- i. At localities where a feature occurs with a frequency less than the lowest isopleth value, its presence is indicated by the symbol ■.

Isogloss Maps (see 1.4.5)

- i. Within labelled areas, the occurrence of the labelled form is indicated by the locality point alone.
- ii. A locality point cancelled by a St. Andrew's cross indicates that the labelled form was not recorded at that locality.
- iii. The occurrence of a form outside its labelled area, or of a form which has no coherent distribution, is indicated by a symbol. A key to such symbols is provided on each map.
- iv. Where, at a locality within a labelled area, alternative forms occur, these are indicated by symbols superimposed upon, or placed either side of, the locality point which, unless cancelled by a cross (see ii above), continues to indicate the presence of the labelled form.
- v. The reference to the relevant section of the text (Volume I) is given in the top right-hand corner of each map.

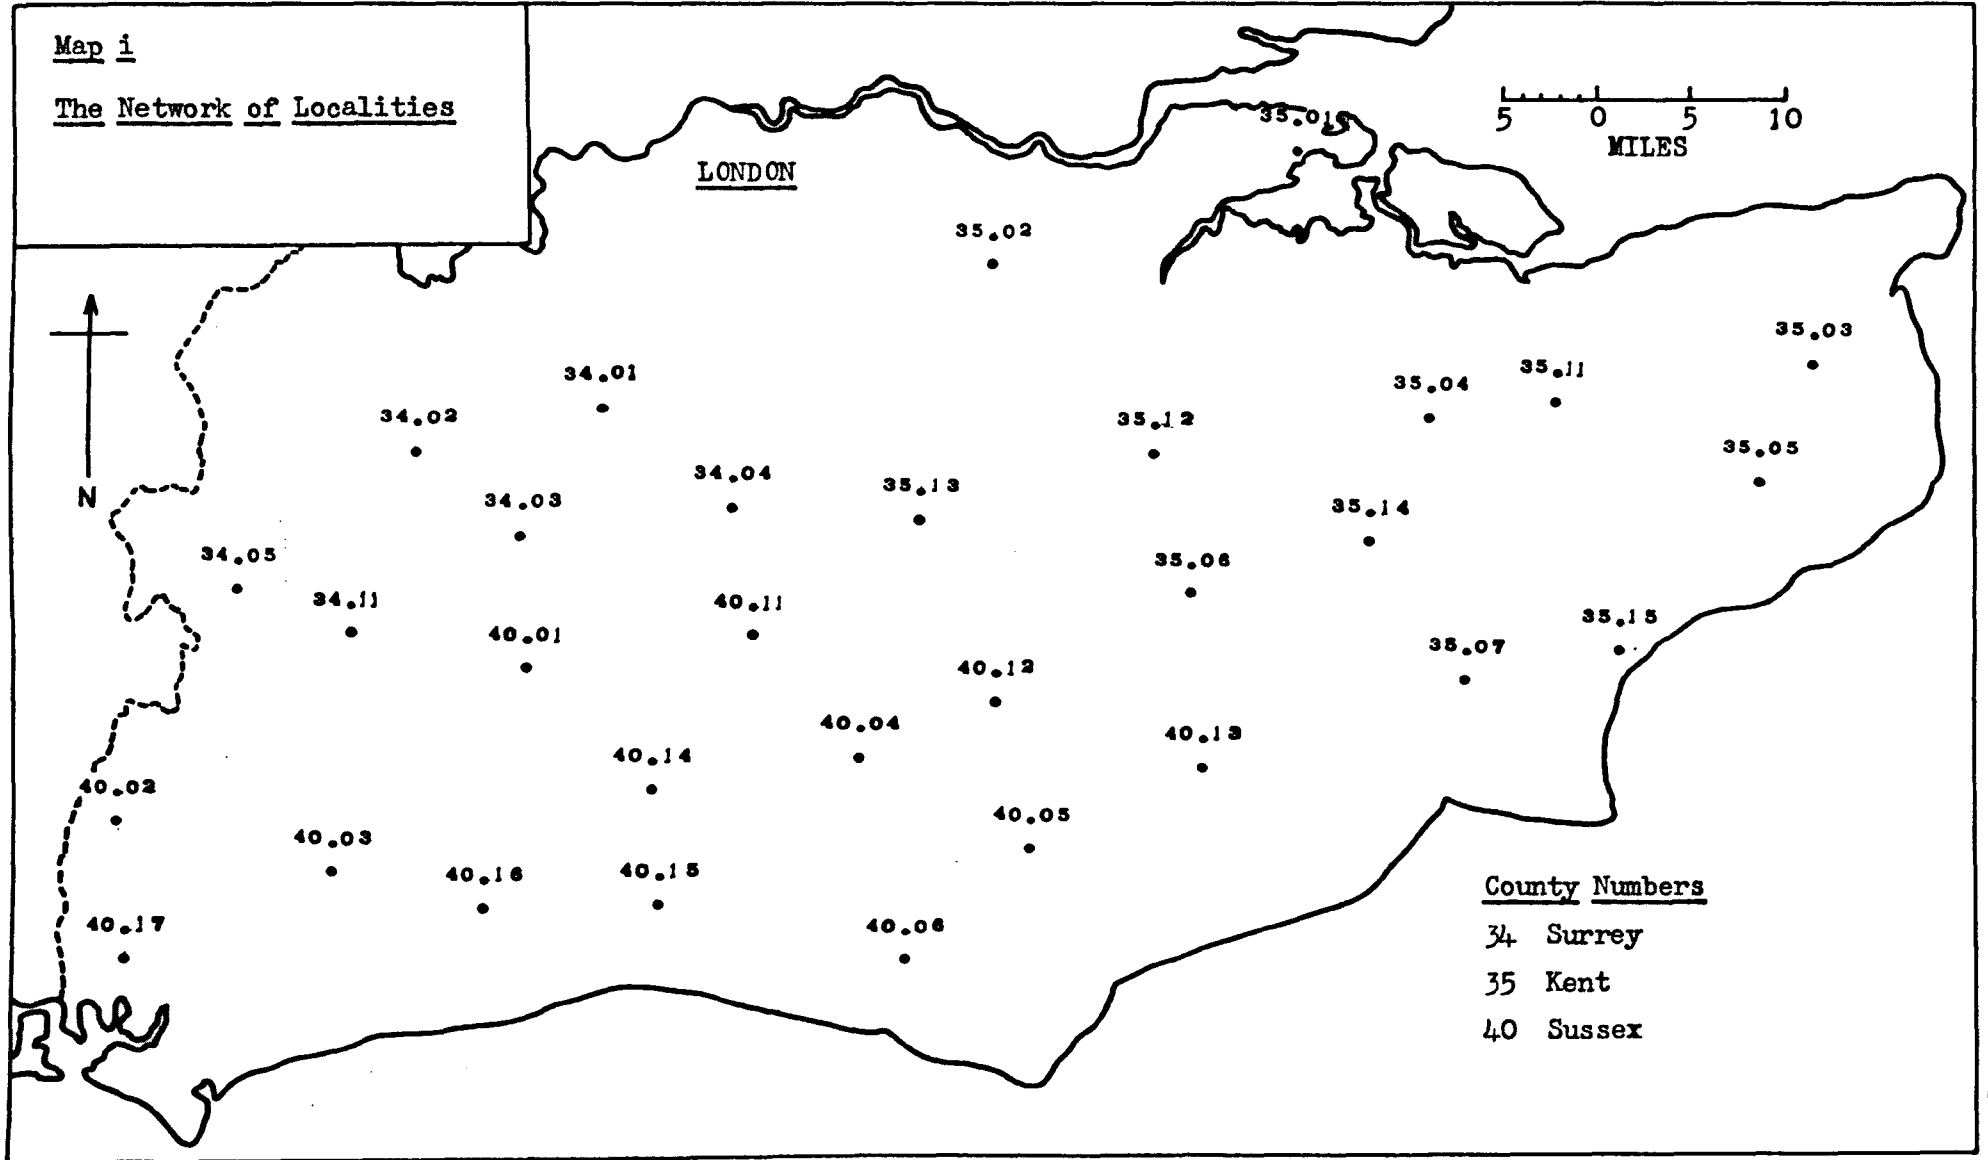

3. Abbreviations

irr.r.	irrelevant response	n.r.	not recorded
n.a.	not asked	rec.	recorded
n.f.	not found	ref.	refers to
n.k.	not known	resp.	response

The information in 2 and 3 above is reproduced on a single loose sheet (in pocket).

## Guide to Maps

### 1. County Numbers

34 : Surrey	}	Counties used for orientation in commentaries
35 : Kent		
40 : Sussex		

### 2. Mapping Conventions

#### Isopleth Maps

- i. At localities where a feature occurs with a frequency less than the lowest isopleth value, its presence is indicated by the symbol ■.

#### Isogloss Maps

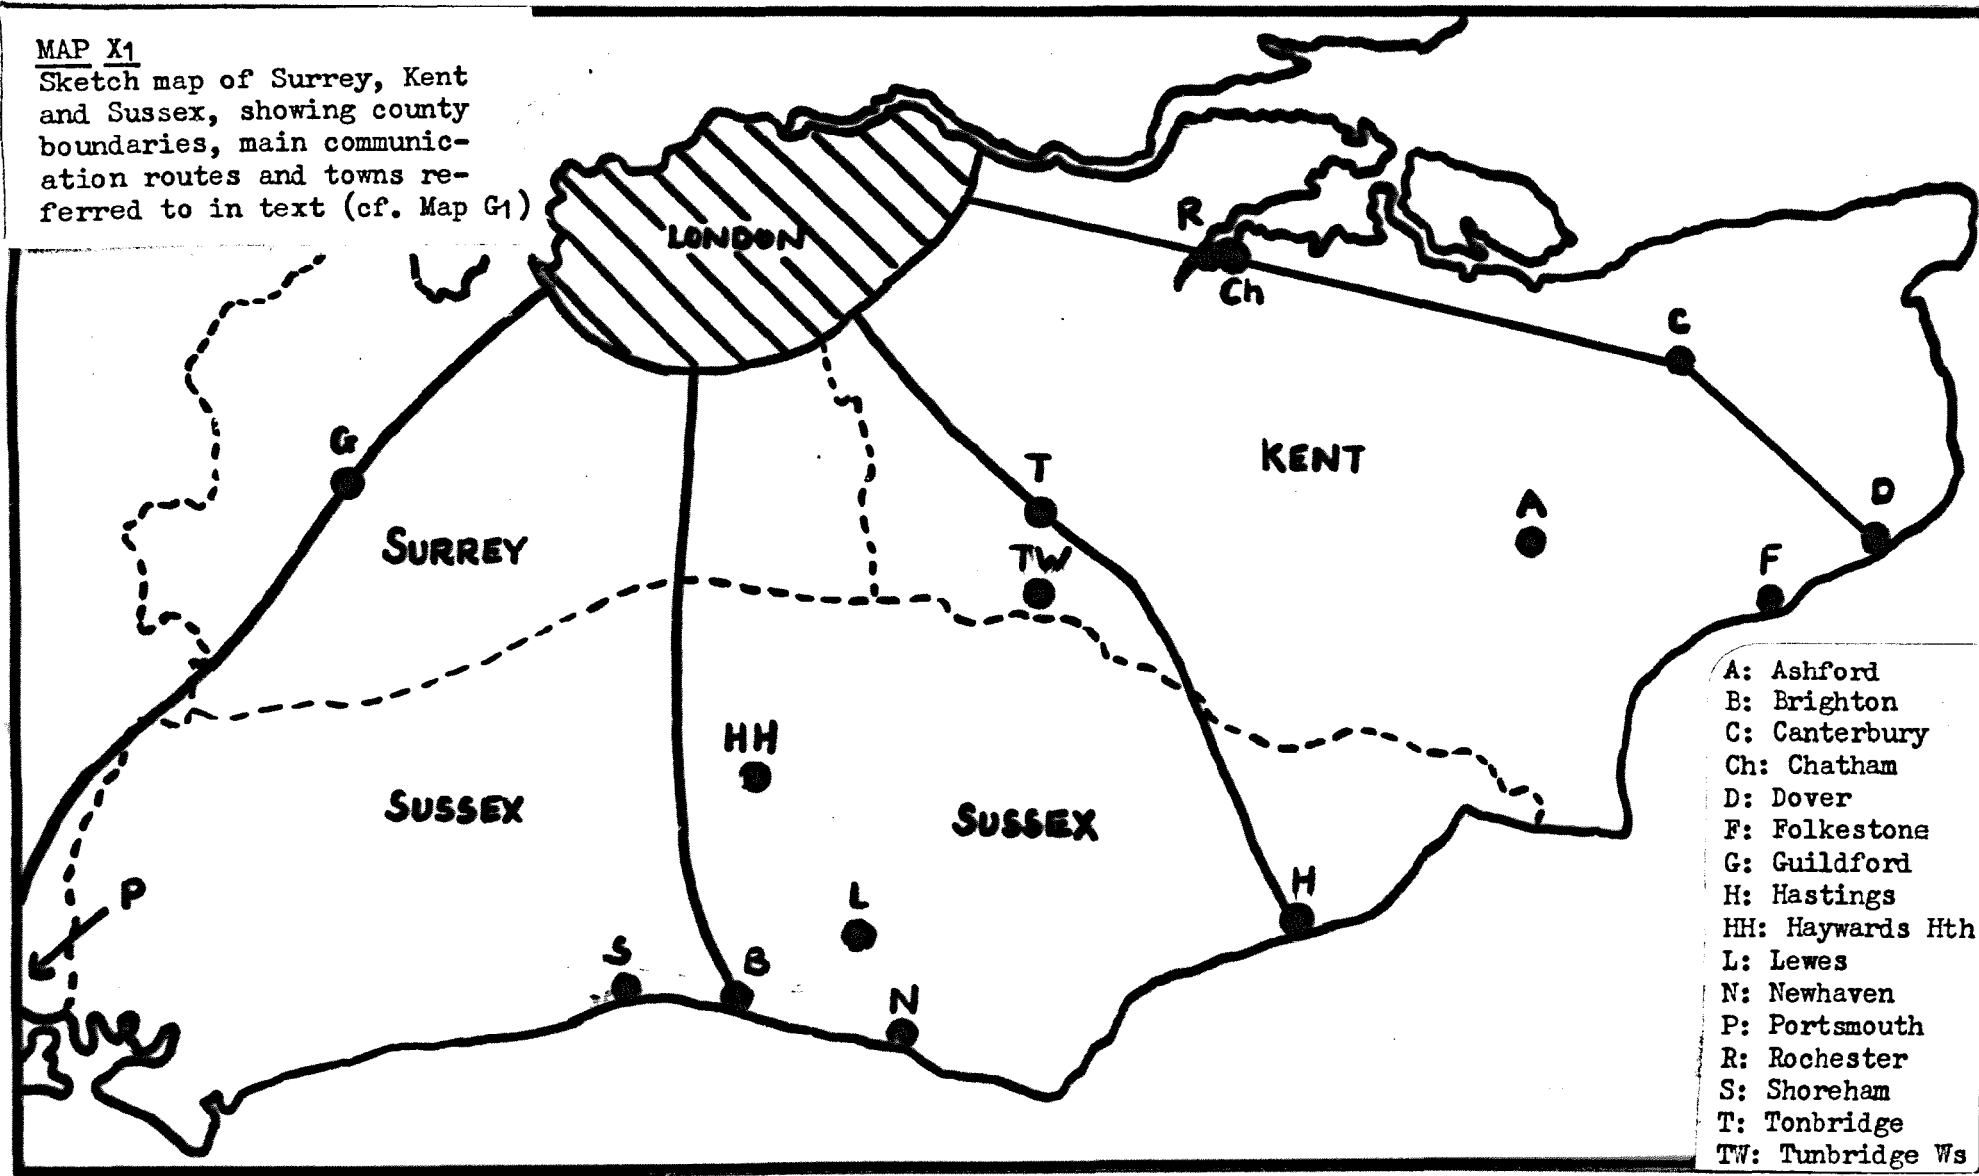

- i. Within labelled areas, the occurrence of the labelled form is indicated by the locality point alone.
- ii. A locality point cancelled by a St. Andrew's cross indicates that the labelled form was not recorded at that locality.
- iii. The occurrence of a form outside its labelled area, or of a form which has no coherent distribution, is indicated by a symbol. A key to such symbols is provided on each map.
- iv. Where, at a locality within a labelled area, alternative forms occur, these are indicated by symbols superimposed upon, or placed either side of, the locality point which, unless cancelled by a cross (see ii above), continues to indicate the presence of the labelled form.
- v. The reference to the relevant section of the text (Volume I) is given in the top right-hand corner of each map.
