									GENERAL COMMENT: some transitions are a bit "forced" and break the form if the preceeding music does not support the development well. This can avoided if the player doesn't move too quickly back and forth between regions. Many of the transitions I have been able to lead to multiple directions based on when the player moves back and forth, and often times the transitions act as bridges, alternate endings, vamps, codas, triggers to repeat previous sections. For the best result, listen to one side for at least 30 seecond before switching, then do the same for the other side - after which, feel free to move back and forth more quickly. This flaw is to be expected since the isn't organized in a way to secure a consistent form 100% of the time, rather, just demonstrating a technique, albeit very complex. There seems to be an empty destination from one of the transitions (from 2 to 1), the transition that ends with 2 sets of melodic sextuplets descending.
